## SAFETY RULES FOR HAND TOOLS

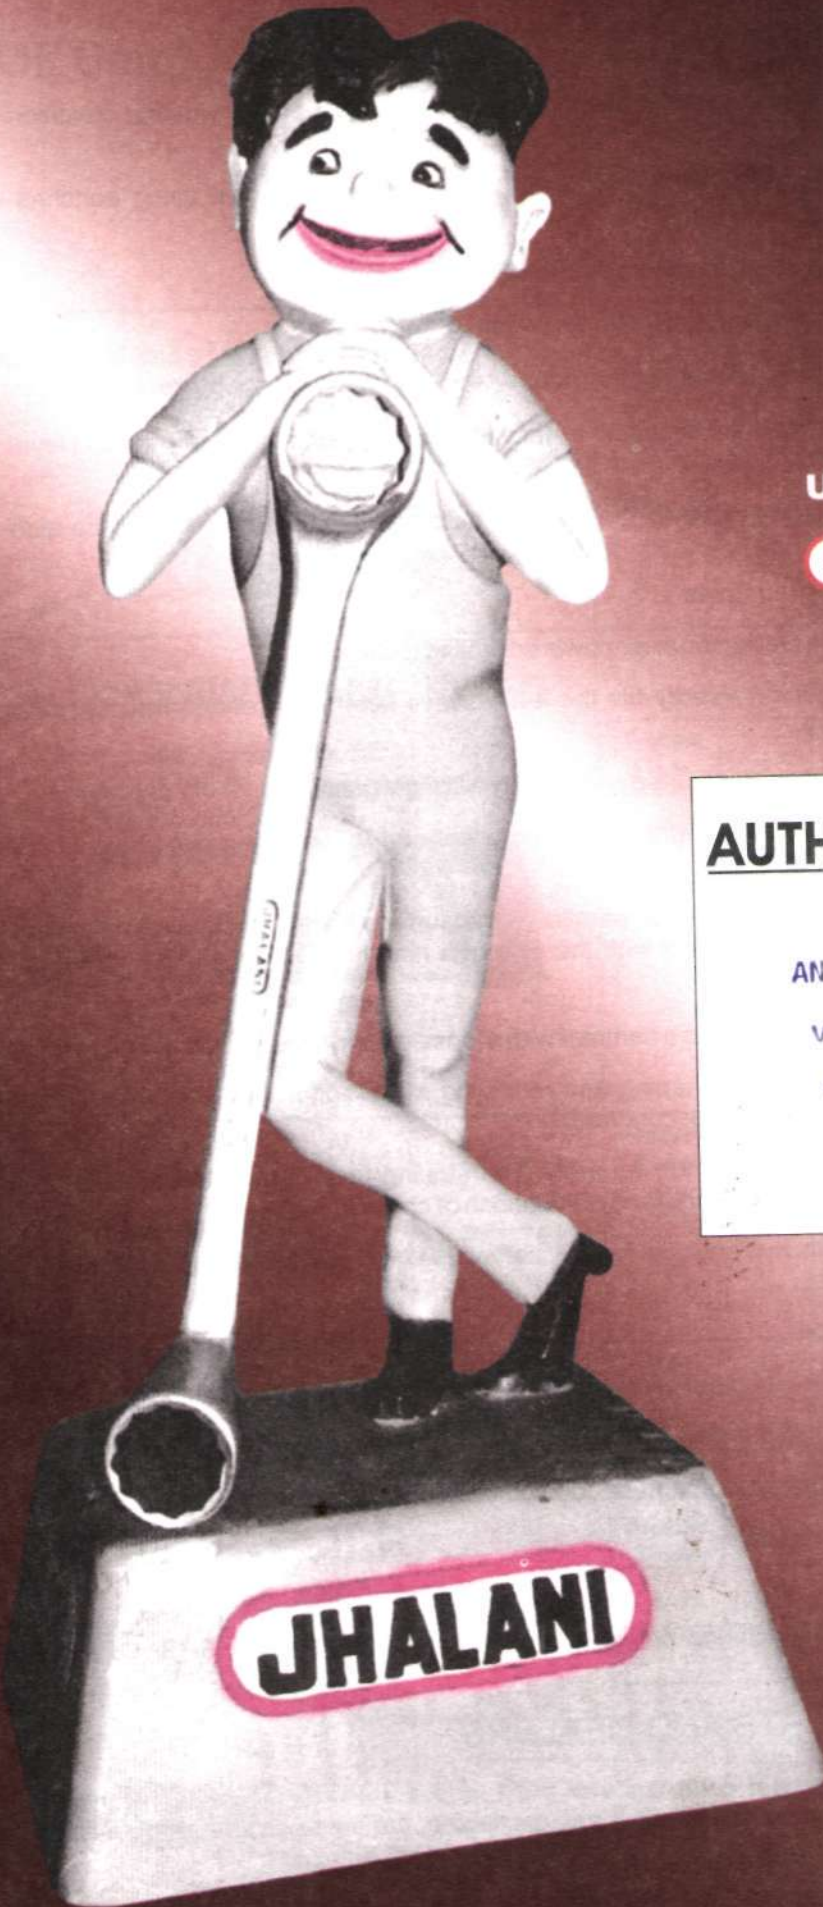

- Always use the right size and type of tool for the job being done. Keep tools in proper working condition. Never alter a tool from its original condition.
- Protect your eyes. Always wear safety goggles when using tools; particularly when using punches chisels hammers, attachments and cutting tools.
- Ordinary plastic dipped handles are designed for comfort-not electrical insulation.
- Never use a tool as a hammer unless manufactured for that purpose.
- When possible, always pull on a wrench handle rather than push and adjust your distance to prevent a fall.
- Never use a pipe extension or other form of "cheater" to increase the leverage of any wrench. Never use a hammer on any wrench, other than a striking face wrench that is designed to be struck.
- Adjustable wrenches should be tightly adjusted to the nut and pulled so that the force is on the side of the fixed jaw.
- Never use a pipe wrench to bend, raise or lift a pipe.
- Never use hand sockets or attachments on electric or air powered driving tools.
- Select a wrench or socket whose opening exactly fits the nut. Always seat the wrench or socket straight on the nut-do not cock the tool when turning.
- Ratchet mechanisms should be cleaned and lubricated periodically with light grade oil.
- Pliers should not be used for cutting hardened wire unless manufactured for that purpose. Always cut at right angles - don't rock from side to side when cutting.
- Always strike squarely with the hammer striking face parallel to the surface being struck. Avoid glancing blows and over and under strikes. Never strike on object with the side of a hammer. Do not strike one hammer with another hammer.
- Keep hammer heads tight on the handle. Never use a hammer with a loose or damaged handle.
- Metal cutting chisels are intended for cutting, shaping and removing metal softer than the cutting edge itself. Never use these tools for cutting or splitting stone or concrete.
- Always strike the struck base of a chisel or punch squarely. The striking face of the hammer should have a diameter approximately 10 mm larger than the struck face of the punch or chisel.
- Use the right type of screw driver with the right tip for the screw. Make sure the tip fits the screw slot, not too loose and not too tight.
- Never use screw drivers with rounded tips.
- Never use a screw driver as a chisel, punch, scraper or pry bar. Use screw drivers for screw driving only.
- Do not use screw drivers with split or broken handles.
- JHALANI cannot be responsible for injury or damage by tools improperly used or from tools which have been abused or badly worn.

## FULL UNCONDITIONAL DURATION WARRANTY

If the item is found to have any latent manufacturing defect, please return it to any of our factories sales depot, or authorised dealer for a free replacement.
